

NEWPORT HARBOR TRASH SKIMMERS

000,000 POUNDS OF DEBRIS REMOVED SINCE 08/01/2016

WHAT WE'RE DOING?

1. RUBBISH AND POLLUTION FLOWS FROM LAND INTO OUR RIVERS, LAKES AND OCEANS

Once it enters the marine environment, it degrades marine habitat, becomes a navigational hazard, and impairs water quality. Plastic, in particular, **never breaks down** and instead becomes tiny pieces, and ingested by animals.

WHAT YOU CAN DO?

SAY NO!
Refuse **single-use** disposable items and skip the straw!

REDUCE & RECYCLE
Reduce the amount you recycle by reducing the amount you consume.

BRING YOUR OWN
Always carry **durable reusable items:** bag, straw, mug and water bottle!

BUY BETTER
Buy less and select multifunctional, repairable, and long lasting products.

USE YOUR VOICE
Express how you want your products designed and recovered. Buy from responsible companies, businesses and manufacturers.

BE RESPONSIBLE
A healthy ocean is critical to our planet and our economy. Do your part to **protect** it!

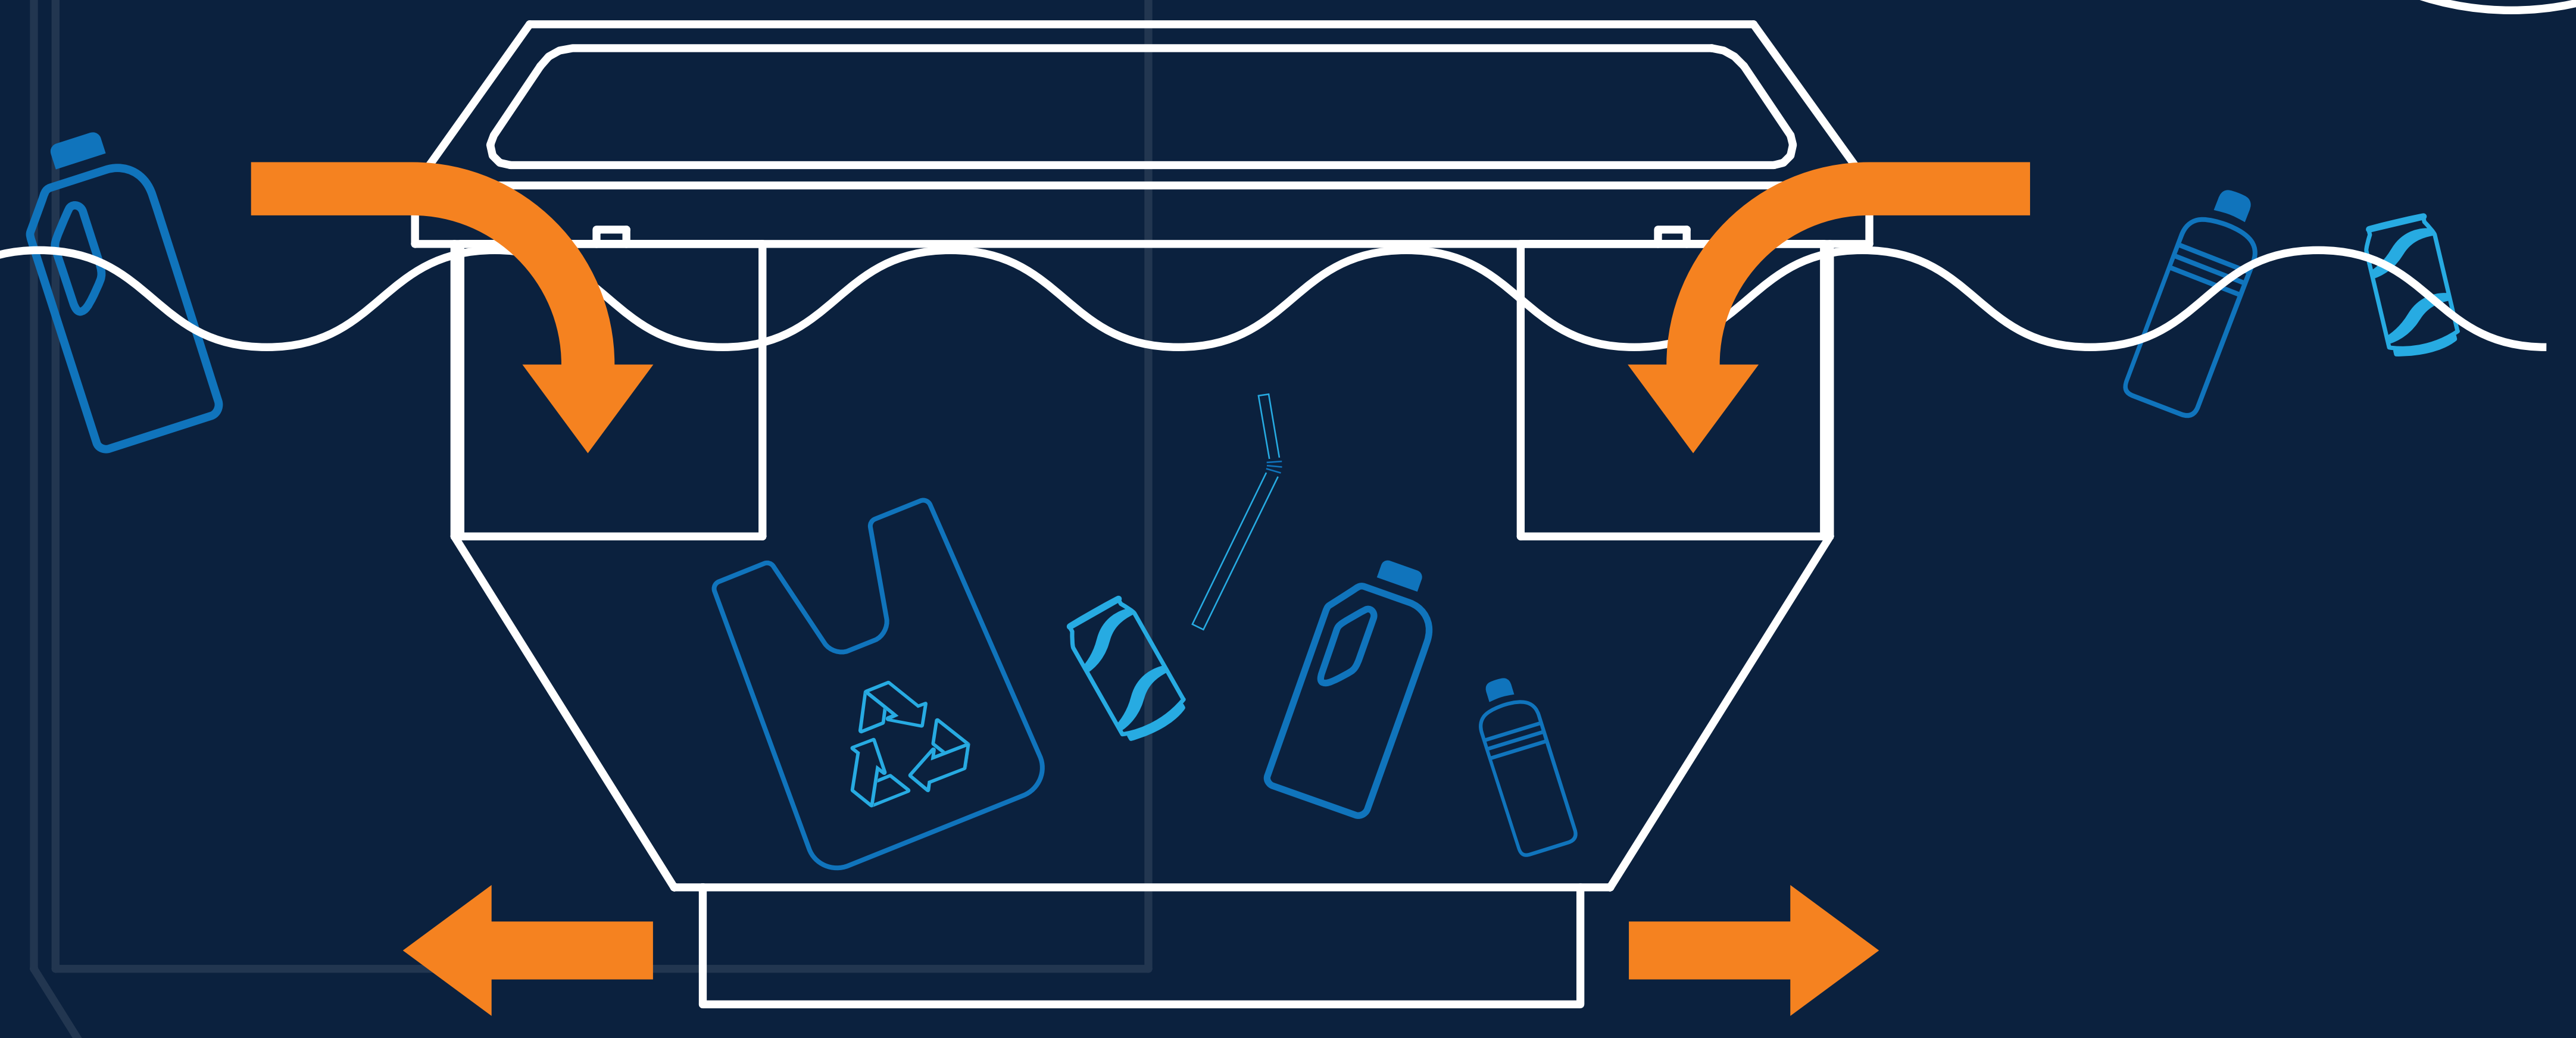

2. THE NEWPORT HARBOR TRASH SKIMMERS REMOVES FLOATING DEBRIS FROM THE WATERS

The units operate **24/7** and continuously removes floating rubbish, oils, plastic and toxins. **Hundreds of gallons of water** are cleaned a day, which leads to a cleaner harbor, healthier habitat and safer waters.

3. MARINE DEBRIS IS A SOLVABLE ISSUE AND IT STARTS WITH EACH OF US

Clean Ocean Access examines the debris to identify sources of pollution and takes action to prevent it. By sharing the results, we educate and inspire the community with simple ways to reduce what you consume, and how it is disposed of can help **prevent** marine debris.
